Asthma Information for Parents

At Calvary Christian Academy, we are committed to supporting students with asthma and helping them safely participate in all school activities. To provide the best care during the school day, we ask families to submit current asthma health information and required medication forms each school year.

Students with asthma should have an up-to-date Asthma Action Plan completed by their healthcare provider. This plan helps school staff recognize symptoms early and respond appropriately if asthma symptoms occur at school.

If your child requires a rescue inhaler or other asthma medication during school hours, the following are required:

- A completed Asthma Action Plan and/or Medication Authorization Form
- Medication provided in the original pharmacy-labeled container
- Medication that is not expired
- Parent/guardian signature and healthcare provider authorization, when applicable

Students may carry and self-administer prescribed rescue inhalers when proper authorization has been completed in accordance with Delaware law and school policy.

Please notify the school nurse if:

- Your child's asthma symptoms change
- Medications are adjusted
- Your child has been hospitalized or treated in the emergency room for asthma
- Emergency contact information changes

We encourage students with asthma to participate in physical education, recess, athletics, and school activities whenever safely possible. School staff and the school nurse work together to help support students' health needs throughout the school day.

For questions regarding asthma care, medications, or required forms, please contact the school nurse.

Please download and complete the Asthma Action Plan below.
